

Notey User Manual

If you don't have Notey already click [here](#).

This Manual assumes you have Windows 10, Notey 1.0.0.2, the .NET Framework 4.6.1 and the Windows File Explorer installed.

Opening Notey	Page 2
Writing a document	Page 2
Saving, opening and making a new document	Page 2-6
Using the in-built web browser to gather information	Page 6
More information about Notey	Page 7

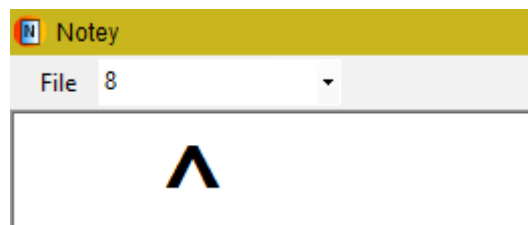

1. Opening Notey

Open Notey by double-clicking on the downloaded .exe file (should be Notey.exe)

2. Writing a document

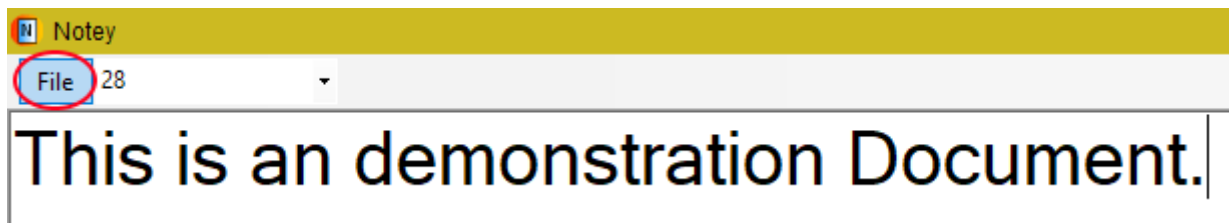

Once you have opened Notey, you should be able to write a simple document by typing on your keyboard. To change the font size click on the font size selector and select the font size you want.

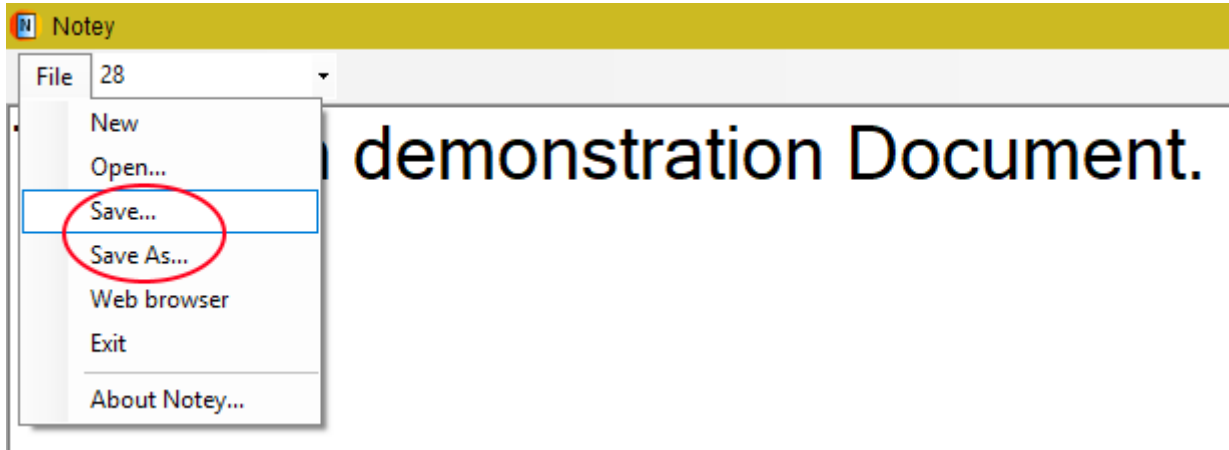

3. Saving, opening and making a new document

To save:

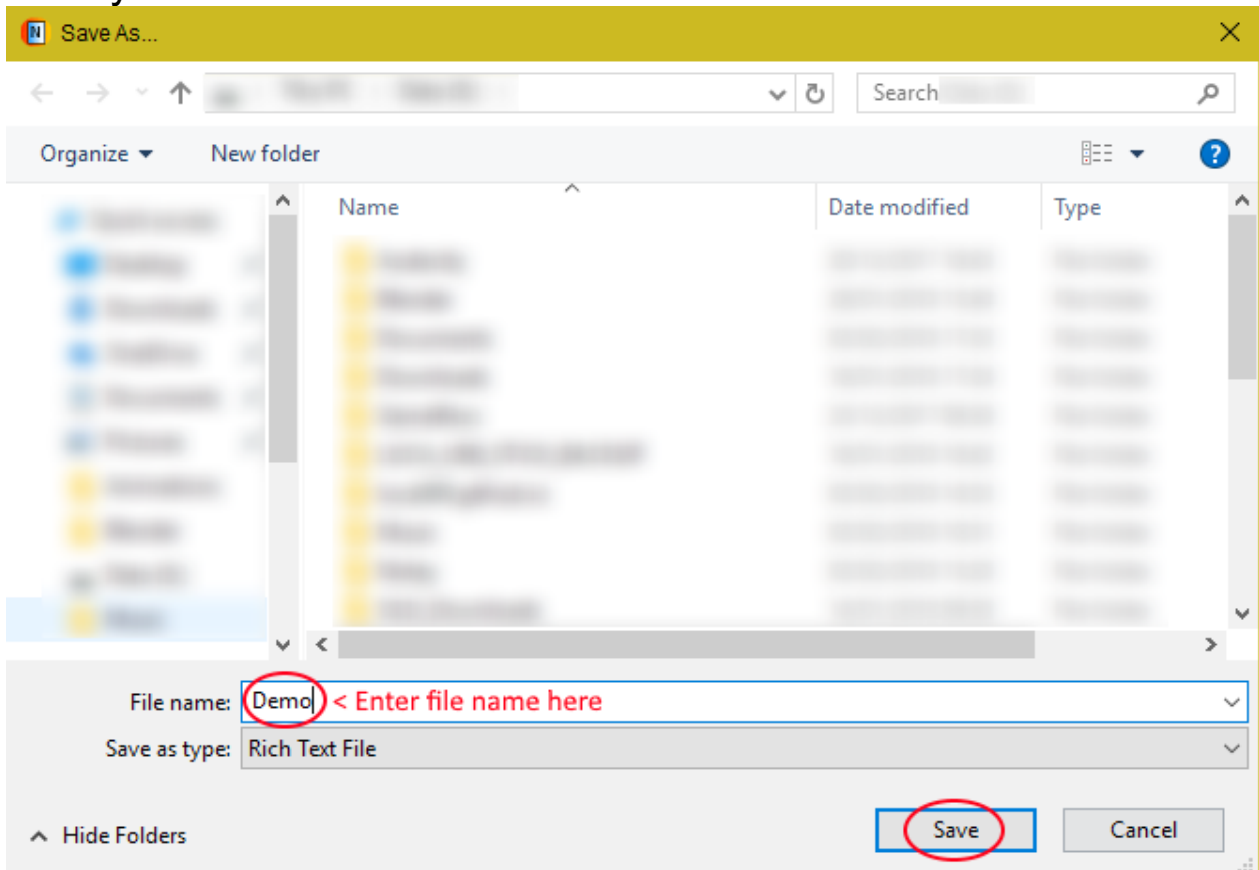

Once you have written your document you may want to save it. To do this simply click on the “File” menu.

Then click on “Save...” or “Save As...”.

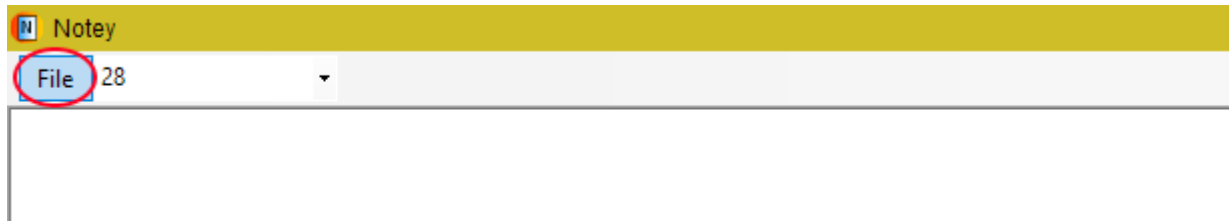

If you saved it the first time or clicked on “Save As...”, then you will get an “Save dialog”, in the “Save dialog” choose a file location then name your file and hit “Save”.

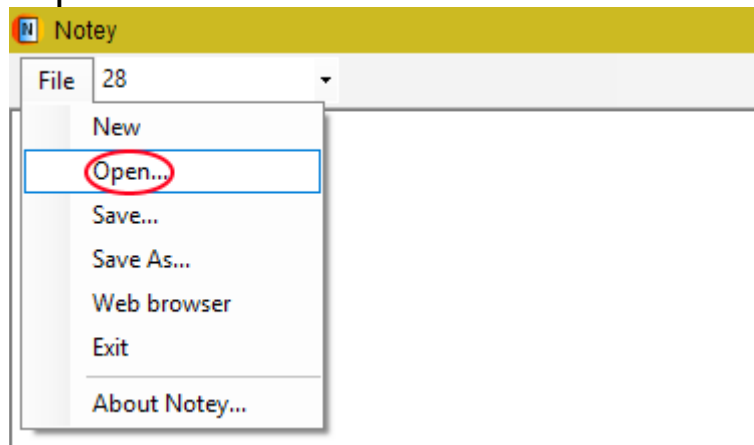

To open:

1. Method

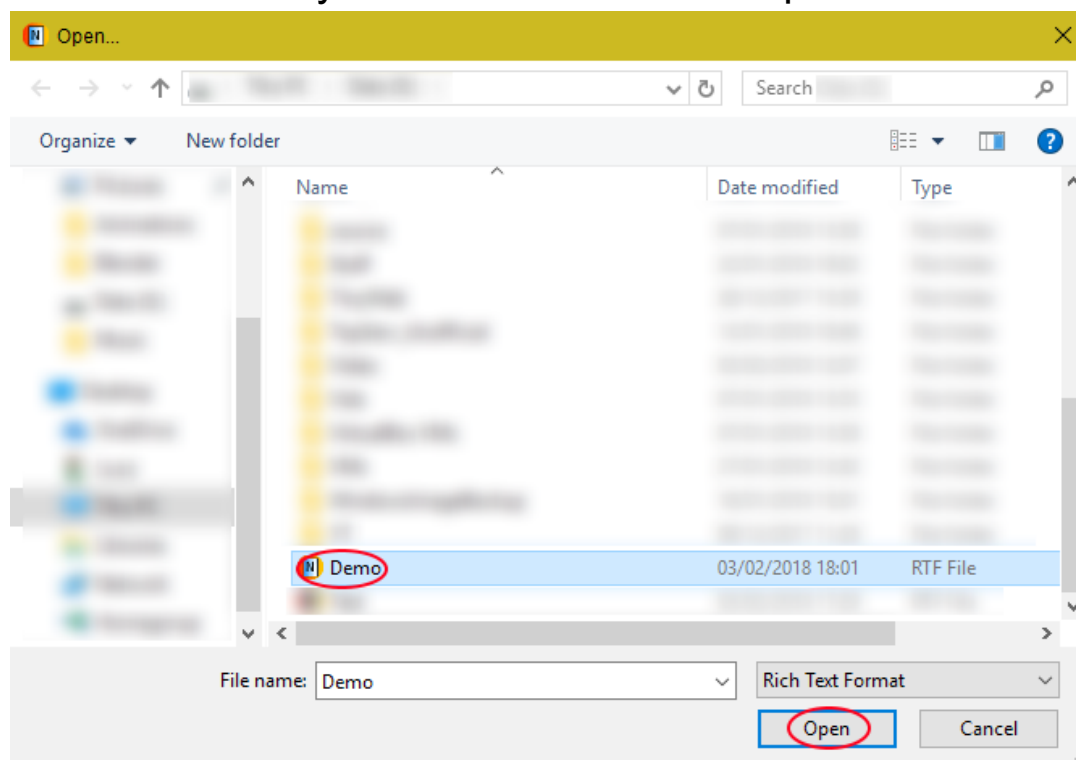

Click on the “File” menu.

Then click on “Open...”.

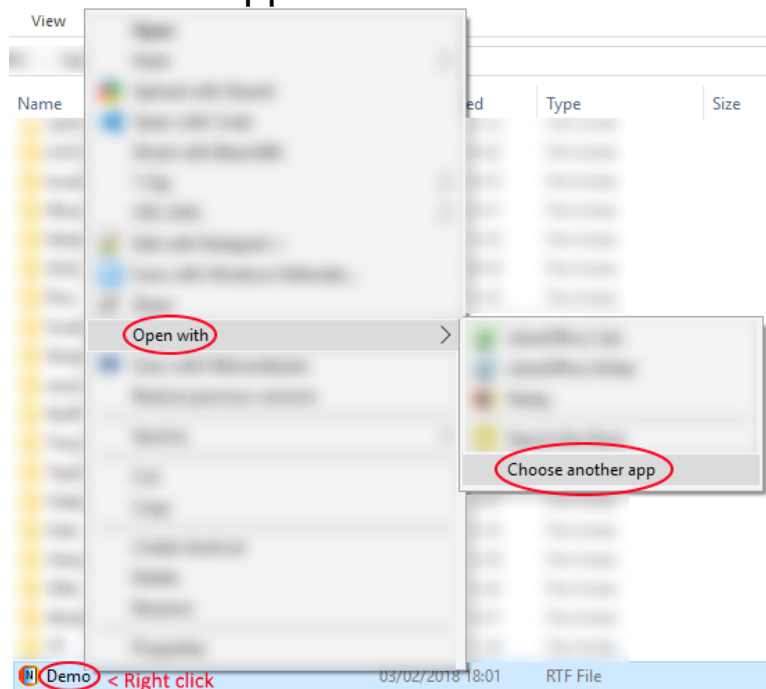

Then select the file you want and click on “Open”.

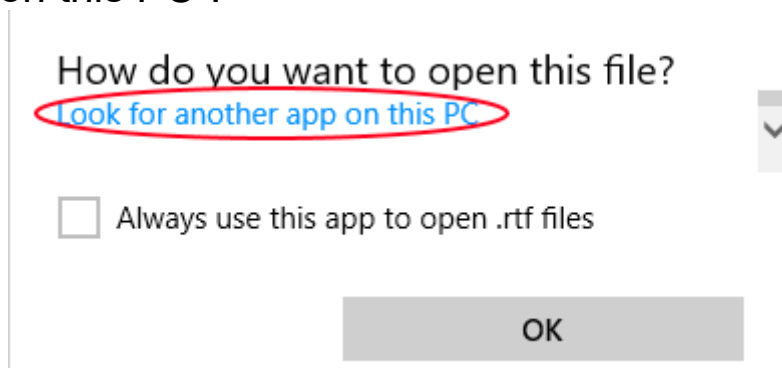

2. Method

Open up your file manager (in example “Windows Explorer”), then locate the file you want to open, then right-click on it, select “Open with” > “Choose another app”.

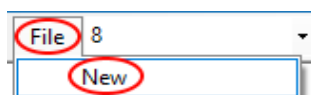

Then click on “More apps”, scroll down and click on “Choose another app on this PC”.

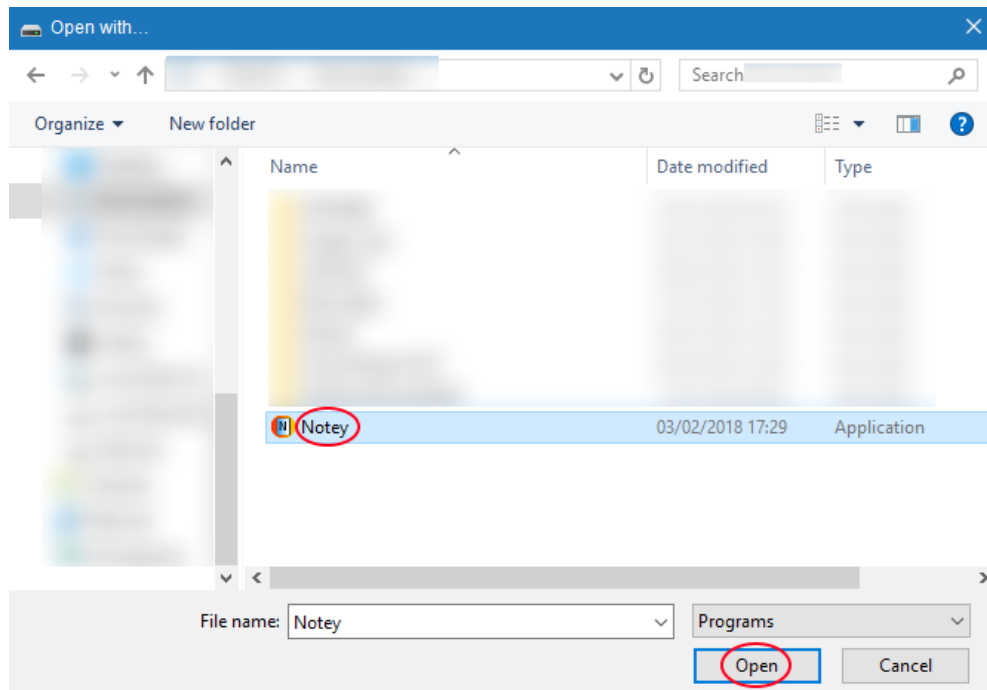

Then browse to the location where you downloaded Notey and select “Notey.exe”, then hit “Open”.

To make a new document

Click on “File” > “New”.

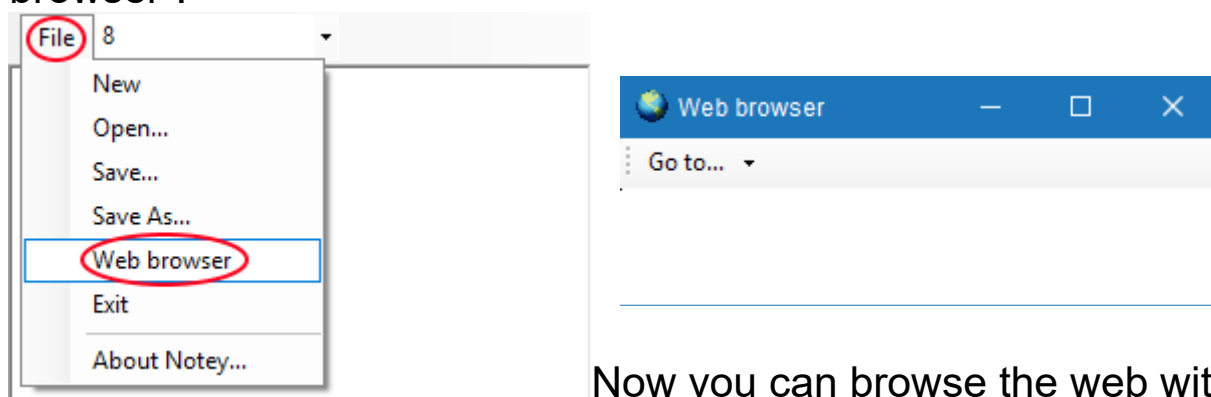

The file should now be opened in Notepad.

4. Using the in-built web browser to gather information

With the built-in web browser it is easy to gather information out of the web just by searching.

To use the built-in web browser simply click on “File” > “Web browser”.

Now you can browse the web within Notepad.

5. More information about Notey
